Software Engineer, Software Developer, Full-Stack Developer, Data Engineer

SKILLS

- **AL, Machine Learning, Python, .NET Core, C#, C++, Java, ASP.NET, MVC, MySQL, MongoDB, SQL Server, PostgreSQL, Agile, Parallel Programming, Azure, Cloud, Git, JavaScript, CSS, React, Angular**

PROFESSIONAL EXPERIENCE

Co-Ax Technology Inc.

Nov 2024 – Now

Software Engineer

- Maintained and extended the **Epicor ERP** system, adding new modules, optimizing, and ensuring seamless operations.
- Upgraded Epicor ERP versions to **Kinetics**, ensuring compatibility with updated databases and improving performance.
- Developed web applications using ASP.NET MVC that interact with **Epicor REST APIs**, enabling system integration without relying on Epicor's native software.
- Designed and implemented an **MVC** application in **C#** to manage data and enhance system accessibility.
- Developed a web-based solution to streamline current workflows, replacing old data storage with SQL Server tables.
- Provided technical support for **MES** (Manufacturing Execution Systems), improving process efficiency on the production line.
- Analyzed and optimized manufacturing workflows, integrating software solutions tailored to the production environment.

Paraillel

May 2024 - Sep 2024

Software Engineer

- Integrated large language models (LLMs) and NLP tools to assist educators in generating, organizing, and customizing teaching materials, enhancing instructional planning through AI-driven content support.
- Developed RESTful APIs using Flask (Python) to enable seamless communication between a React-based front end and AI-enhanced back-end services using MySQL databases.

Bowling Green State University, Bowling Green, OH

Aug 2023 - April 2024

Graduate Research Assistant

- Created a project aimed at classifying user reviews on Google Play using NLP techniques to extract features from reviews.
- Designed and developed a system written in Python, utilizing regression models to enhance Insurance Premium Prediction through the integration of clustering and interpretable machine learning models.
- Served as a Teaching Assistant for the computer science courses, including C++ and Python.

Novin Hi-Tech Solutions

Sep 2010 - Dec 2022

Software Developer

- Created "**Preventive Maintenance**" and "**Discrepancy Finder**" software by .Net Core and MVC technology using **Generative AI**, which significantly improved operational efficiency by identifying potential issues, reducing manual tasks for employees.
- Participated in projects utilizing regression models and **ML** techniques to predict and identify valuable customers and employees, based on features like sentiment analysis and performance indicators.
- Developed over 10 programs for the banking and industrial sectors, utilizing .Net, C# (WinForms and Web applications) and various database technologies such as SQL Server, Oracle, and MySQL. These applications automated key business processes, optimized performance, and enhanced data accuracy.
- Modernized and upgraded several project websites using React, Angular, and optimized back-end performance with scalable databases such as PostgreSQL. Improved responsiveness, security, and implemented RESTful APIs and encryption techniques.

Software Developer

- Designed and developed software providing an IDE for report design, utilizing company data.
- The project had the capability to design and generate dynamic reports using **OOP** principles and component-based design.
- This project was notably **innovative** for its time, significantly reducing both time and costs associated with report creation by developers while **empowering users** with intuitive design capabilities.

EDUCATION

Bowling Green State University, Bowling Green, OH	Master’s, Computer Science	Jan 2023 - April 2024
Ferdowsi University	Master’s, Information Technology Management	Sep 2015 - Jul 2017
Azad University	Bachelor, Software Engineering	Sep 1999 - Sep 2003

HONORS & AWARDS

- Fully Funded Graduate Scholarship with Stipend Bowling Green State University 2023–2024
Awarded a full scholarship including tuition coverage and annual stipend for outstanding academic performance and research contribution.

PUBLICATION

- Prioritizing App Reviews for Developer Responses on Google Play
<https://doi.org/10.18293/DMSVIVA2024-153>
- Dynamic classification using the adaptive competitive algorithm for breast cancer detection
<https://doi.org/10.4236/jdaip.2025.132006>.
- A Hybrid Time-Series and ANFIS Model for Rail Transport Energy Forecasting: Leveraging Stationarity for Improved Accuracy
<https://doi.org/10.17559/TV-20251121003149>
